Like all medical procedures, not all patients are suitable for the treatment. Talk to your medical provider about the risks and benefits of this procedure. A qualified practitioner is solely responsible for evaluating each subject's suitability to undergo treatment and for informing those being treated about any risks involved with the treatment, pre-and postoperative care, and any other relevant information. Individual results may vary and are not guaranteed.

These before and after photographs are of a patient treated with Cynosure's PicoSure device, not the PicoSure Pro device advertised herein. The PicoSure Pro device has the same parameters as the PicoSure device and so while individual results vary, similar results are expected.

Permanent tattoo removal

Black Ink | Multicolored | Previously Treated

Ready to lose that tattoo? Do it faster with PicoSure® Pro

PicoSure Pro by Cynosure offers advanced tattoo removal with PressureWave™ technology, which works with your body to remove unwanted ink without harming the surrounding skin.

Selective "shattering" with PressureWave™ technology

PressureWave™ technology is the secret behind tattoo treatments with the PicoSure Pro device. The treatment delivers laser energy that specifically targets tattoo ink, resulting in the successful shattering of just the ink particles without harming the surrounding tissue.

PicoSure Pro by Cynosure works effectively on:

- Multicolored tattoos, including blues and greens
- Hard-to-remove black ink
- Stubborn, previously treated tattoos

Best of all, PicoSure Pro treatments require fewer sessions than traditional tattoo laser options.

How does a PicoSure® Pro treatment work?

During the PicoSure Pro treatment, laser energy is delivered to the unwanted tattoo, targeting the ink and breaking it down into smaller particles. Those tiny particles are then eliminated through the body's natural processes.

See the difference

Electron Microscopy Courtesy of H.B Jalian, MD

Unlike traditional lasers, which rely on heat to destroy tattoo ink, the PicoSure Pro device uses PressureWave™ technology to effectively shatter ink into tiny particles.

Better clearance of the tattoo and fewer treatments compared to conventional laser tattoo removal

Lose the ink, Faster

- Number of treatments needed is dependent on variables such as ink characteristics, size of tattoo, location on body, and lifestyle habits
- Treatments typically occur every 6-8 weeks

**Your treatment provider will develop a treatment plan to meet you individual needs.*
